how the system works

1. A number of our stamps are mounted on thin wood slides. These slide easily into our acrylic handles. The sides of our handles are finished with hard white maple and are grooved to assist handling and placement while stamping.
2. As you slide the stamp into our handle, it is held in place by a small holding device. This holding device aids in providing a snug fit for the wood slide. As seen below, the angle of the wood slide matches the angle of the handle. Both of our handles and wood slides are marked with letters {a}- {b}- {c} or {d}. These letters provide an easy marrying system for the user.
3. The wood slide is inserted with one simple slide motion and removed with the same kind of ease.
4. Simply turn over our handle and adhere any cling foam rubber stamp to the acrylic portion of our handle. The acrylic portion of our handles is universal and will work with any un-mounted red rubber on cling foam or clear acrylic stamp.
